Role Of Capital Market In National Income

Dr. Shala Rahman Khan
Assistant Professor, Department of Commerce, D.A.V. P.G. College, Dehradun (U.K.)

Abstract

Capital Market is one of the significant aspects of every financial market. Hence it is necessary to study its correct meaning. Broadly speaking the capital market is a market for financial assets which have a long or indefinite maturity. Unlike money market instruments the capital market instruments become mature for the period above one year. It is an institutional arrangement to borrow and lend money for a longer period of time. Capital markets help channelize surplus funds from savers to institutions which then invest them into productive use. Generally, this market trades mostly in long-term securities.

Key Wards: Capital market, institutions, securities.

INTRODUCTION

Capital Market is one of the significant aspect of every financial market. Hence it is necessary to study its correct meaning. Broadly speaking the capital market is a market for financial assets which have a long or indefinite maturity. Unlike money market instruments the capital market instruments become mature for the period above one year. It is an institutional arrangement to borrow and lend money for a longer period of time. It consists of financial institutions like IDBI, ICICI, UTI, LIC, etc. These institutions play the role of lenders in the capital market. Business units and corporate are the borrowers in the capital market. Capital market involves various instruments which can be used for financial transactions. Capital market provides long term debt and equity finance for the government and the corporate sector. Capital market can be classified into primary and secondary markets. The primary market is a market for new shares, where as in the secondary market the existing securities are traded. Capital market
institutions provide rupee loans, foreign exchange loans, consultancy services and underwriting. Capital markets help channelize surplus funds from savers to institutions which then invest them into productive use. Generally, this market trades mostly in long-term securities. Capital market consists of primary markets and secondary markets. Primary markets deal with trade of new issues of stocks and other securities, whereas secondary market deals with the exchange of existing or previously-issued securities. Another important division in the capital market is made on the basis of the nature of security traded, i.e. stock market and bond market.

Role Market

Like the money market capital market is also very important. It plays a significant role in the national economy. A developed, dynamic and vibrant capital market can immensely contribute for speedy economic growth and development.

Important role of the capital market:

1. Mobilization of Savings: Capital market is an important source for mobilizing idle savings from the economy. It mobilizes funds from people for further investments in the productive channels of an economy. In that sense it activates the ideal monetary resources and puts them in proper investments.

2. Capital Formation: Capital market helps in capital formation. Capital formation is net addition to the existing stock of capital in the economy. Through mobilization of ideal resources it generates savings; the mobilized savings are made available to various segments such as agriculture, industry, etc. This helps in increasing capital formation.

3. Provision of Investment Avenue: Capital market raises resources for longer periods of time. Thus it provides an investment avenue for people who wish to invest resources for a long period of time. It provides suitable interest rate returns also to investors. Instruments such as bonds, equities, units of mutual funds, insurance policies, etc. definitely provides diverse investment avenue for the public.
4. **Speed up Economic Growth and Development**: Capital market enhances production and productivity in the national economy. As it makes funds available for long period of time, the financial requirements of business houses are met by the capital market. It helps in research and development. This helps in, increasing production and productivity in economy by generation of employment and development of infrastructure.

5. **Proper Regulation of Funds**: Capital markets not only helps in fund mobilization, but it also helps in proper allocation of these resources. It can have regulation over the resources so that it can direct funds in a qualitative manner.

6. **Service Provision**: As an important financial set up capital market provides various types of services. It includes long term and medium term loans to industry, underwriting services, consultancy services, export finance, etc. These services help the manufacturing sector in a large spectrum.

7. **Continuous Availability of Funds**: Capital market is place where the investment avenue is continuously available for long term investment. This is a liquid market as it makes fund available on continues basis. Both buyers and seller can easily buy and sell securities as they are continuously available. Basically capital market transactions are related to the stock exchanges. Thus marketability in the capital market becomes easy.

**Conclusion**
The lack of an advanced and vibrant capital market can lead to underutilization of financial resources. The developed capital market also provides access to the foreign capital for domestic industry. Thus capital market definitely plays a constructive role in the overall development of an economy.
